

True Professional Crane Services

## ***Why have Safety Assessments and Procedures?***

Dyna Crane Services offers site specific safety assessments. It all begins with a simple phone call. We will come to your facility to simply observe and note the process in your day to day operations. We analyze and compile the information into a total package for your review with "improvement opportunities" noted.

### **IMPROVEMENT OPPORTUNITIES**

Opportunities for improvement are sometimes overlooked in our day to day operations. We become so complacent with routine, and the way "it's always been done" that opportunities for improvement become difficult to identify. Because Dyna Crane is impartial and experts in overhead crane work we have a more objective view of your daily operations. Once we meet and discuss possible solutions the next step will be implementing change.

### **IMPLEMENTING CHANGE**

This is often the toughest part of safety assessments. We offer to assist and educate the entire staff as to the reasons for the change, the hazards directly involved with existing issues and why we need to change the process to make a difference. It may be something as simple as a rigging practice or as large as a safe work procedure to help eliminate the hazard. It could also be a custom below-the-hook device that may help make the difference to simplify the process of dangerous rigging practices evolving into hazard reduction or even elimination.

Dyna Crane Services offers a custom designed site specific Overhead Crane Operator Safety Course. We take into consideration all variables identified in your daily operations. We simply make a course to suit your needs. This includes site photography for "before and after" scenarios. The incorrect practices are then easily identified and discussed with the operators using visual aids and group discussions. Dyna Crane works hard to ensure everyone understands why these changes are necessary.

We follow and instruct according to provincial Occupational Health and Safety rules and regulations and CSA B167 regulations as they pertain to the overhead crane industry. We believe that education is the best defense to preventing accidents.

**Let's work together to make the change.**
